

TestAce™ Centralised Testing Environment

The complete click to run testing platform

TestAce™ CTE is an innovative software testing package that can interface with 3rd party test equipment to provide a centralised and common test environment, allowing testers to execute suites of tests on varying platforms at a click of a button.

TestAce™ CTE is comprised of features which help to achieve maximum lab utilisation time and increased testing efficiency.

- Click to run test execution
- Enables testers to perform automated or manual testing on varying platforms
- Improves productivity, quality and employee efficiency
- Web based at a glance metrics and reporting
- Fully utilise your resources with 24/7 testing
- Many additional features to benefit all areas of software testing

TestAce™ - Can you afford to be without it?

TestAce™ Automated Test Operations Manager

Measure your performance accurately

TestAce™ ATOM is the ideal tool for measuring data transfer rates over wired or wireless networks.

All TestAce™ ATOM features are scriptable, which means a comprehensive set of test scripts can be easily generated and placed on an execution queue for fully automated 24/7 testing.

During script generation, simply specify the desired pass / fail criteria (e.g. min transfer rate) while creating a test script and let TestAce™ ATOM run the test and log the pass / fail result directly to the database.

Key features of TestAce™ ATOM include:

- Accurate FTP, HTTP, E-mail and Audio/Video Streaming measurement
- Test script generation to build a comprehensive set of fully automated regression tests
- 24/7 automated test script execution
- Ethereal Interface for the capture and viewing of network traffic
- Web based results and metrics viewing

TestAce™ Automated Resource Scheduler

Maximise your resource utilisation

TestAce™ Automated Resource Scheduler is a giant step ahead of any other resource scheduler. It ensures resources are allocated to users, directly meeting their needs.

In a busy workplace, it is essential to achieve efficient management of company resources and to ensure maximisation of successful requests.

Key features of TestAce™ ARS include:

- Resources are re-distributed on data updates to maximise resource utilisation
- Resources are allocated on a confirmation time basis
- Receive notifications as soon as resources become available
- Use the affected bookings information to make informed decisions when changing resource data
- Periodical 24 hour metrics allow you to fully justify costly budget decisions.

TestAce™ Automated Resource Scheduler – The only choice.
